The Scores at Half Time
An update on the international discussions on the governance of marine biodiversity in areas beyond national jurisdiction*

Glen Wright, Julien Rochette (IDDRI), Sebastian Unger (IASS), Kristina Gjerde (IUCN), Jeff Ardron (IASS)

* The second meeting of the BBNJ WG took place during the group stages of the 2014 World Cup, resulting in a number of light-hearted exchanges amongst delegations.

Marine areas beyond national jurisdiction (ABNJ) represent around half of the Planet’s surface and a significant amount of its biodiversity. Over the past decades, the international community has become increasingly cognisant of the growing threats to ABNJ. To address this issue, the United Nations General Assembly (UNGA) created an Ad-Hoc Open-ended Informal Working Group (“BBNJ Working Group”) to engage in discussions on the conservation and sustainable use of marine biodiversity in ABNJ.

Since the commencement of discussions in 2006, the focus has mainly been on gaps in the current international framework and whether these necessitate the adoption of a new instrument. In particular, States have discussed the possible adoption of an Implementing Agreement to the United Nations Convention on the Law of the Sea (UNCLOS) on the conservation and sustainable use of marine biodiversity in ABNJ (UNCLOS IA).

At the 2012 United Nations Conference on Sustainable Development (“Rio+20”), States agreed to decide by the end of the 69th session of the UNGA (September 2015) whether or not to launch the negotiations for the conclusion of such a new global agreement. This decision-making process spans three meetings of the BBNJ Working Group, specifically convened to discuss “the scope, parameters and feasibility of an international instrument under UNCLOS”.

Two of these meetings have already taken place, in April 1-4 and June 16-19, 2014. This paper highlights the remaining challenges on the “long and winding road” towards the conservation and sustainable use of marine biodiversity in ABNJ.

HIGHLIGHTS

- A large majority of States now support the opening of negotiations for a United Nations Convention on the Law of the Sea (UNCLOS) Implementing Agreement on the conservation and sustainable use of marine biodiversity in ABNJ.
- States also agree that the possible future negotiations should be based on the “Package Deal” agreed in 2011, covering (i) marine genetic resources; (ii) area-based management tools; (iii) environmental impact assessments; and (iv) capacity-building and the transfer of marine technology.
- There are however controversies about whether an UNCLOS Implementing Agreement should fill only legal gaps (e.g. on access and benefit sharing [ABS]), or have a broader vision, e.g. by enumerating guiding principles for the management of ABNJ, strengthening existing agreements and institutional arrangements, and enhancing cooperation and coordination.
- States are divided on the role of an UNCLOS Implementing Agreement in fisheries management.
A SOLID COALITION FOR THE OPENING OF THE NEGOTIATIONS

With only a few States and regional groupings actively engaged in prior discussions of the BBNJ Working Group, international support for an UNCLOS IA blossomed at the most recent meeting. It is now clear that a strong majority of States support the opening of negotiations.

The European Union (EU) and the G77 and China, as leading proponents of an IA, continue to argue in favour of an IA to UNCLOS. The EU noted that the April meeting already demonstrated the political will of the majority, and argued that two extant IAs demonstrated the dynamic character of UNCLOS and the feasibility of a new IA. The G77 and China (represented by Bolivia) reiterated that the status quo is not an acceptable way forward and that an IA is essential for the sustainable use of marine resources.

This position is now also vocally supported by the “new entrants” to the BBNJ discussions, i.e. the States and regional groups that had previously remained silent during the BBNJ discussions. Liberia, speaking on behalf of the African Union, noted that current gaps in the legal regime for ABNJ, and particularly on access and benefit sharing (ABS), mean that technologically advanced States can exploit marine resources without concomitant responsibility to protect the environment. Trinidad and Tobago, speaking on behalf of the Caribbean Community (CARICOM), noted that an IA is the only feasible solution for ensuring that developing States benefit from conservation and sustainable use of resources, including marine genetic resources. Papua New Guinea, speaking for the Pacific States, called for urgent actions to conserve marine biodiversity in ABNJ and expressed its support for negotiating a new IA.

A few States, however, remain reluctant to negotiate a new IA for a variety of reasons. The United States (US) maintains that the need for such an agreement has not yet been proven and argues that marine genetic resources in ABNJ fall under the freedoms of the high seas regime. The US has engaged strongly in the debate regarding the need to respect the mandates of existing organisations and argues that a new agreement would add little value. Canada also questions the added value of a new IA and its interaction with existing arrangements. Russia does not believe a global IA will meld with existing regional approaches, and argues for negotiations that are limited to clear legal gaps and consensus issues. In its view, this excludes environmental impact assessments (EIA) and fisheries from the discussions. Iceland, Japan and Korea expressed similar opinions.

Despite continued reticence, some of these States appeared to be more open during the June meeting. Norway in particular, while taking a firm stance on respecting the mandate of existing organisations, showed willingness to advance the negotiations in other respects.

The openness and transparency at the previous two meetings of the BBNJ Working Group is a stark contrast to earlier meetings, which were largely conducted behind closed doors and excluded civil society groups, the scientific community and even representatives from international organisations and competent management bodies. In April and June, statements from observer organisations were welcomed and provided valuable input into the debate and helped to clarify points of discussion.

The positive outcomes of the June BBNJ Working Group meeting evidence the value of broad engagement of previously silent States, particularly developing countries, as well as civil society.

EMERGING CONSENSUS AND ONGOING DEBATES

The June meeting saw some convergence on an increasing number of issues. There was broad support for maintaining the deadline set at Rio+20 and avoiding the prolongation of the current process. In terms of negotiating an eventual IA, States agree that UNCLOS provides the authority for such an agreement and that it should form the basis of negotiations. States also agree that the possible future negotiations should be based on the Package Deal agreed in 2011 covering (i) marine genetic resources, including questions on the sharing of benefits; (ii) measures such as area-based management tools, including marine protected areas; (iii) environmental impact assessments; and (iv) capacity-building and the transfer of marine technology.

There is also an emerging consensus that the debate regarding the legal principle applicable

to marine genetic resources from the international seabed Area, i.e. the choice between common heritage of mankind and freedom of the high seas, should be suspended in favour of focusing on the equitable and practical realities of enhancing access and benefit sharing of marine genetic resources from the Area and the high seas as the two realms are intrinsically interconnected from a biological and ecological perspective. The International Seabed Authority (ISA) could serve as a model or could itself be given an expanded mandate, as suggested by a number of States.

Beyond these elements of convergence, a number of debates on substantive issues intensified and demonstrated the likely ‘battle lines’ of future negotiations. Firstly, States disagree on whether an IA should fill only legal gaps or whether it should have a broader vision. Some delegations argue that filling discrete legal gaps is the only legitimate role for an IA, while others argue for a much broader role in enumerating guiding principles for the management of ABNJ; strengthening existing agreements and institutional arrangements, enhancing cooperation and coordination, and catalysing the political will to better address important regulatory and governance gaps. The 1995 United Nations Fish Stocks Agreement on straddling and highly migratory fish stocks (UNFSA), another implementing agreement to UNCLOS, serves as an example of how these functions might be incorporated, but this time with the goal of integrating biodiversity considerations into ABNJ management.

All delegations agree that an IA should respect the mandates of existing organisations, such as the International Maritime Organisation (IMO) for shipping, Regional Fisheries Management Organisations (RFMOs) for fisheries and the ISA for deep sea mining. However the question of what this means in practice has proved particularly divisive and will likely continue to be a point of significant debate. In this context, much attention was given to the role of regional organisations (i.e. RFMOs and Regional Seas programmes). Some delegations, most notably the EU, the G77 and China, and New Zealand, have argued that an IA would act as a mechanism to enhance cooperation and coordination by, for example, advising existing institutions, communicating information and formulating recommendations. The unstated concern is that some of the sectoral organisations have not done enough to integrate biodiversity into their decision-making processes. Most delegations feel that mechanisms for enhancing cooperation and coordination could be best determined in the course of negotiations. On the other hand, delegations such as the US and Russia consider that a new IA with a strong mandate for proactive intervention would inevitably encroach on other organisations’ mandates and would therefore be unacceptable, while also arguing that a new body with only weak powers for coordinating activity would not add value and would therefore not be worth the lengthy negotiation process necessary for its establishment. IUCN sought to clarify by saying that States parties could be called upon, as part of any new agreement, to strengthen existing institutions to reflect priorities and principles spelled out in such an agreement. For example, the UNFSA spelled out ways for States to implement their duty to cooperate with respect to conservation and sustainable use of highly migratory and straddling fish stocks. At that same time, the UNFSA also elaborated standards to guide the performance of RFMOs that were left to States Parties to implement within and through those organisations. This debate has been particularly pronounced in relation to fisheries. A number of fishing States argued strongly that there is no place for fisheries in a new IA as this is already covered by the UNFSA and RFMOs and that these arrangements already provide sufficient protection of marine biodiversity in ABNJ. Conversely, many States argue that as fish form part of the biodiversity of the high seas, and as fishing impacts on biodiversity are currently the greatest threats, fisheries management should be implicated by any agreement on high seas biodiversity. In a similar vein, the role of a new IA in implementing and enforcing EIA and MPAs was discussed. While some States questioned how an IA could add value to existing agreements, others argued that an IA could provide a truly ecosystem-based approach to these processes. An IA could have a strong cooperation and coordination role, as well as providing guiding principles, oversight and improving enforcement. As such, it could help to integrate biodiversity conservation and sustainable use into the activities of sectoral organisations, without undermining their sectoral mandates.

The distinction between the regional and global approaches to oceans governance was also implicated by many of these discussions. Some States consider that the global nature of an IA is in conflict with the regional nature of existing governance arrangements. Other States do not see a need to choose between approaches, but rather see them as complementary elements of a comprehensive governance framework. For example, the EU spoke of a collaborative approach, rather than a strict regional/global distinction. Norway underlined the good examples at a regional level that could be a starting point for a possible agreement, e.g. in the North-East Atlantic through complementary action by the North East Atlantic Fisheries Commission (NEAFC) and the OSPAR Commission. These States envisage that an IA
may stimulate coordination between regional and
global bodies, incentivise States to participate in
regional efforts, and provide for global endorse-
ment of regional MPA activities.

A further question exists as to the eventual in-
titutional arrangements of an IA, in particular
whether the IA will require its own institutional
structure to achieve the goal of enhancing coopera-
tion and coordination, such as a new interna-
tional body, or whether a Conference of Parties might
provide more flexibility. Expanding the mandate
of the ISA has been mentioned as a possibility.
Some States noted that existing regional organi-
sations, such as the OSPAR Commission, could be
given a stronger role through an IA to help coordi-
nate activities at a regional level. Other States and
organisations pointed out that a Conference of
Parties would be the logical nexus for coordination
and cooperation and that global level endorse-
ment would be needed to secure global level coop-
eration on MPAs. Some States argued that parties
to a possible new agreement could for instance be
obliged to cooperate to achieve the objective of a
new agreement through their participation in rele-
vant bodies such as IMO, RFMOs, Regional Seas
programmes and the ISA.

Finally, there is a practical issue that arose at
the June meeting. A number of States highlighted
the fact that negotiations should not commence
prematurely during the three initial meetings, but
rather that States should focus on the broad scope
and parameters of any new international instru-
ment under UNCLOS as a prelude to launching ne-
gotiations in 2015. Such States favour beginning
the negotiations with all issues on the table, while
others, which favour ‘marching orders’, plead for
commencing negotiations with a narrow focus,
specifically on legal gaps and excluding aspects
such as fisheries.

WHAT’S NEXT?
The Co-Chairs will now elaborate a “convergence
report”, highlighting the main elements of agree-
ment that have emerged in the Working Group.
States are invited to make further additional
written statements, which will be discussed during
the next meeting (20-23 January 2015).

This will likely be the final meeting as the ma-
jority of States expressed their reluctance to hold
an additional meeting. There will therefore be no
‘extra time’ and the Working Group will have to
decide, by consensus, whether or not to recom-
end to the UNGA that negotiations be opened.
In the event that no consensus is reached, the Co-
Chairs could instead submit a statement to the
UNGA summarising the different positions and is-
sues under consideration. A decision could then be
adopted in the UNGA during its 69th session with a
majority vote.

In the meantime, it is crucial for delegations to
continue informal meetings and identify possible
elements of convergence on such a recommenda-
tion to the UNGA. Civil society can play a critical
role in mobilising States that are yet to be involved
in the discussions, galvanising support, informing
the substantive debate, and calling for an ambis-
tious approach to any future agreement.

Finally, it is worth noting that an UNCLOS IA
would not supplant the existing role of regional
governance mechanisms and institutions; it is not
a question of “either/or”. Existing instruments
must be implemented and reinforced as any new
regime for ABNJ will depend on strong and well-
coordinated action of competent management
bodies at different levels. The sectoral organisations with mandates in ABNJ should
therefore not wait for the UNGA decision before
taking ambitious actions for the conservation and
sustainable use of marine biodiversity in ABNJ.
